3. Test the static rams.
4. Test all switches.

If a screen ram is defective random bars will flash on screen.

If a static ram is defective a random dotted pattern will flash on screen.

Dotted pattern will flash on the screen. If all rams are good the switch test pattern will appear on the screen.

All switches must be "off" to get the pattern shown above. When each switch is turned on the position of that switch will disappear.

Time delay between returning test switch to "off" and game over sequence is normal approx. 25 seconds.
